Industrial Fuel use

01

Industrial Fuel are used as energy-generating fuels in power plants and for power units.

02

It is used primarily for steam boilers in power plants, aboard ships, and in industrial plants.

03

It consists mainly of residue from crude oil distillation.

04

Heating oil, also called Industrial fuel, is used in boilers & furnace for generating heat energy or for industrial heating, and for producing electricity in power plants.
